**Take a Closer Look** Princeton University Press What happens when we look at a painting? What do we think about? What do we imagine? How can we explain, even to ourselves, what we see or think we see? And how can art historians interpret with any seriousness what they observe? In six engaging, short narrative "fictions," each richly illustrated in color, Daniel Arasse, one of the most brilliant art historians of our time, cleverly and gracefully guides readers through a variety of adventures in seeing, from Velázquez to Titian, Bruegel to Tintoretto. By demonstrating that we don't really see what these paintings are trying to show us, Arasse makes it clear that we need to take a closer look. In chapters that each have a different form, including a letter, an interview, and an animated conversation with a colleague, the book explores how these pictures teach us about ways of seeing across the centuries. In the process, Arasse freshly lays bare the dazzling power of painting. Fast-paced and full of humor as well as insight, this is a book for anyone who cares about really looking at, seeing, and understanding paintings. **Leonardo Da Vinci A Closer Look** Leonardo da Vinci's drawings are among the most accomplished and technically varied ever made. Taguchi emphasized a proactive approach toward quality in terms of embedding quality requirements into the design of product, process and/or system, which highly influenced today's quality approaches such as the 'quality-by-design' concept strongly demanded in the era of the fourth industrial revolution that we are currently facing. This book contributes to a further development, extension and application of the Taguchi's quality loss concept, aiming to overcome limitations of the traditional quadratic quality loss function and to address complex demands and circumstances in a dynamic and globalized contemporary industrial sector. It presents essential issues and heterogeneous complementary aspects of

the quality loss function, including the theoretical background and advances as well as different application studies. The opening chapter is dedicated to the quality loss functions used in quality engineering, presenting an in-depth theoretical background of the traditional loss function, the bounded loss function concept, i.e. the reflected normal loss function, and the family of inverted loss functions, and proposing the recently developed loss function types. The second chapter is focused on the Taguchi's and inverted quality loss functions, univariate and multivariate types, and their advances and implications in tackling real, heterogeneous industrial problems in statistical quality and process control. The third chapter considers an application of the quality loss and quality cost concepts at a system level, by introducing the quality policy model of an organization, developed and implemented in a middle-sized manufacturing company in the automotive industry. The fourth chapter deals with the comparison and alignment of the Taguchi's orthogonal arrays and the traditional full factorial approach for experimental design, including also the method for analysis of experimental results, depicted by two use cases from different industrial sectors. The last chapter proposes an advanced quality loss-based method for discrete process parameter optimization that tackles processes characterized by multiple correlated responses. The benefits of its implementation are illustrated on heterogeneous process optimization problems, and comparison with several frequently used optimization methods clearly demonstrates its superiority, effectiveness and applicability in real industrial conditions. Therefore, this book offers a unique combination of two aspects relevant for scientists and statisticians, and engineers and managers, respectively: (i) strong scientific background on the quality loss function, its modifications and extensions, and novel, advanced developments; (ii) hands on approach for application of the quality loss function-based methods designed for product, process and/or system quality improvement in different stages, from the experimental design, via analysis of experimental results and process parameter optimization, toward an organizational quality policy implementation.

**Saints A Closer Look** *Servant Books* Anyone can achieve a reasonable level of sanctity, but the saints are in a league of their own. What sets them apart? Does holiness come more naturally to them than to the rest of us? Do they endure severe temptation? How do grievous sinners become saints? How has history been influenced by the saints? Are the saints relevant today? What do they mean for you? In answering these questions and many more, Father Thomas Dubay not only reveals what makes the saints tick, but also nudges readers toward the heights of sanctity themselves. It's an uphill battle for everyone, but the lives of the saints make it clear that great holiness is possible for all if we allow ourselves, as they do, to fall radically in love with God.

**Focus Take a Closer Look Inflammation A Closer Look at What Drug Companies Do Not Want You to Know Still Life** *National Gallery Publications Limited* What is still life? We are familiar with the objects portrayed but have difficulty explaining the essence of this popular art form. Erika Langmuir examines the special fascination of still life, and what distinguishes it from other categories of painting. She discusses its evolution from the trompe l'oeil wall paintings of antiquity, through its revival in the age of Caravaggio and Velázquez, and again in the works of Cézanne and Picasso. Originally published as Pocket Guide Still Life, this eloquent survey benefits from a wider format, new reproductions, and updated references.

**Science A Closer Look. Grade 6 A Closer Look at Criminal Justice** This is a collection of daring chapters on the state of the discipline. Each chapter considers a specific criminal justice or criminological problem ... new or persistent ... with fresh eyes. The contributors pull no punches: their insights are novel, salient, and sometimes controversial. A Closer Look at Criminal Justice is thematically divided into three parts. Part 1: Criminal Justice and Criminology in Education, discusses how we teach our undergraduate students about race, the way we treat our graduate students, and inmate education. We wanted to highlight criminal justice education at the university level in the first part of the book in large part because this book is best suited in the classroom, but especially because as educators, we live and breathe the importance of education. The book progresses in Part 2, Theory and Praxis, with a discussion of applicable criminological theory and research methodology in criminal justice where the goal is to highlight the importance of using theory and research as the foundation for policy positions, support, and understanding. The remaining part of the book, Persistent Issues in Criminal Justice, provides fresh insights on "old" subjects and problems in the administration of justice, such as community policing, the aging prison population, and marijuana use in the United States of America. This book is best suited in senior seminars, capstone, or contemporary issues courses; master's level classes on the criminal justice system; and is also important for faculty members and doctoral students with a vested interest in the current tempo of criminal justice practice, research, education, and thought. Reading this book, students and scholars should have a better idea of the current issues facing our discipline, particularly those issues that do not get as much exposure as others.

**Taking a Closer Look at Writing A Closer Look at Ariel A Memory of Sylvia Plath A Closer Look at Spelling** In this book the authors take a closer look at spelling, the teaching and learning of which is considerably more complex than is often assumed. In order to spell well, children need to learn how to strategically use knowledge about phonology, orthography, morphology and etymology. It is also a visual activity that involves the laying down and retrieval of visual representations of words and word parts in memory. Children also need to learn how to use the metalanguage associated with spelling - words like phoneme, syllable, affixes and morpheme - as this will help them talk and think about spelling strategies. Thus, spelling is a language activity and also a thinking activity. Ideally, it should also be a meaningful activity that is engaged in with a positive attitude. The authors draw on the theoretical and research literature, as well as classroom examples, to explain how to teach primary school aged children to use multiple strategies to spell. They also consider the assessment of spelling, as well as how to assist those who have difficulties in learning to spell. The work makes links to the Australian Curriculum: English This book would help primary and preservice teachers by providing them with understandings, based on research and theory, which would help them choose and use appropriate pedagogical strategies (also provided in the book) to teach spelling to children with diverse needs, including children from EAL/D backgrounds and those with difficulties and disabilities that impact on spelling.
