TEXTBOOK OF OCCUPATIONAL MEDICINE PRACTICE (FIFTH EDITION)

World Scientific Following the success of the fourth edition, which was highly commended in the primary health care category for the 2018 British Medical Association (BMA) Medical Book Awards, this fifth edition has been substantially revised and updated to reflect significant changes in health care practice and to incorporate the explosion of information since the advent of the fourth industrial revolution and the COVID-19 pandemic. As before, the book covers target organ systems that can be affected by hazardous exposures in traditional industries and modern workplaces, both of which coexist in different parts of the world and present unique occupational health challenges for the medical practitioner. To this end, this reference textbook focuses on the clinical presentations, investigations, and medical and work-centric management of affected individuals. We have retained consideration of some special issues relevant to occupational medicine practice in this new edition and included a new section relating to the multidisciplinary nature of occupational health practice. The main emphasis continues to be prevention of disease and early detection of health effects caused by work exposures. This edition of the book has been updated to include new information and references. We have kept some of the previous case studies and illustrations, and introduced several new ones, some of which reflect the changes of practice due to the COVID-19 pandemic — for example, in risk communication, recognition and management of the risks of health care and frontline work. We have again asked international experts in occupational medicine and cross-disciplinary medical specialties to jointly author many of the chapters. Some of the authors are from Asia, and others from Europe, the United States, United Kingdom and Australia. All the authors have either clinical and/or academic experience in, or related to occupational medicine practice. The book is targeted at all those who are interested in the interaction between work and health, and how occupational diseases and work-related disorders may present and be managed. It will be of interest to medical practitioners, especially those in primary care and doctors intending to pursue a career in occupational medicine. It would also be relevant for allied health and safety professionals wanting to know more about health effects resulting from occupational exposures. Other groups who may find this edition useful as a ready reference are medical students, occupational health nurses, or clinical specialists in diverse fields such as dermatology, respiratory medicine, infectious diseases or toxicology.

LEADERSHIP COMMITMENTS TO IMPROVE VALUE IN HEALTH CARE

FINDING COMMON GROUND: WORKSHOP SUMMARY

National Academies Press This volume reports on discussions among multiple stakeholders about ways they might help transform health care in the United States. The U.S. healthcare system consists of a complex network of decentralized and loosely associated organizations, services, relationships, and participants. Each of the healthcare system's component sectors--patients, healthcare professionals, healthcare delivery organizations, healthcare product developers, clinical investigators and evaluators, regulators, insurers, employers and employees, and individuals involved in information technology--conducts activities that support a common goal: to improve patient health and wellbeing. Implicit in this goal is the commitment of each stakeholder group to contribute to the evidence base for health care, that is, to assist with the development and application of information about the efficacy, safety, effectiveness, value, and appropriateness of the health care delivered.

ENCYCLOPEDIA OF HEALTH SERVICES RESEARCH

ED. BY ROSS M. MULLNER

SAGE At the very heart of modern healthcare is a critical paradox. Today, as never before, healthcare has the ability to enhance the quality and duration of life. At the same time, healthcare has become so enormously costly that it can easily bankrupt governments and impoverish individuals and families. According to federal forecasters, by the year 2015 one in every five U.S. dollars will be spent on healthcare, for total annual healthcare spending of more than \$4 trillion. While the cost of healthcare is going up, the number of individuals and families without health insurance coverage is increasing. For many, the miracles of modern medicine may be unaffordable. Health services research investigates the relationship between the factors of cost, quality, and access to healthcare and their impact upon medical outcomes (i.e., death, disease, disability, discomfort, and dissatisfaction with care). Health services research addresses such key questions as, Why is the cost of healthcare always increasing? How can healthcare costs be successfully contained without jeopardizing quality? How can medical errors be eliminated? What is the medical impact of not having health insurance coverage? The proposed encyclopedia addresses these and other important questions and issues.

BEST CARE AT LOWER COST

THE PATH TO CONTINUOUSLY LEARNING HEALTH CARE IN AMERICA

National Academies Press America's health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009--roughly \$750 billion--was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions.
