LITERACY MYTHS, LEGACIES, & LESSONS

NEW STUDIES ON LITERACY

Transaction Publishers In his latest writings on the history of literacy and its importance for present understanding and future rethinking, historian Harvey J. Graff continues his critical revisions of many common ideas about literacy among scholars and others. The eight wide-ranging and diverse essays speak to each other's central concerns about the place of literacy in modern and late-modern culture and society, and its complicated historical foundations. The introduction for Literacy Myths, Legacies, & Lessons sets the stage for connections between the principal concerns of this book. Drawing on other aspects of his research, Graff places the chapters that follow in the context of current thinking and major concerns about literacy, and the development of both historical and interdisciplinary studies. Special emphasis falls upon the usefulness of "the literacy myth" as an important concept and subject for interdisciplinary study and understanding. Critical stock-taking of the field includes reflections on Graff's own research and writing of the last three decades and the relationships that connect interdisciplinary rethinking and the literacy myth. The collection is noteworthy for its attention to Graff's reflections on his identification of "the literacy myth" and in developing the LiteracyStudies@OSU initiative as a model for university-wide interdisciplinary programs. The essays also deal with ordinary fears about literacy, or illiteracy, that are shared by academics and concerned citizens. The nontechnical essays will speak to both academic and nonacademic audiences across disciplines and cultural orientations. --Book Jacket.

OVERSOLD AND UNDERUSED

Harvard University Press Impelled by a demand for increasing American strength in the new global economy, many educators, public officials, business leaders, and parents argue that school computers and Internet access will improve academic learning and prepare students for an information-based workplace. But just how valid is this argument? In *Oversold and Underused*, one of the most respected voices in American education argues that when teachers are not given a say in how the technology might reshape schools, computers are merely souped-up typewriters and classrooms continue to run much as they did a generation ago. In his studies of early childhood, high school, and university classrooms in Silicon Valley, Larry Cuban found that students and teachers use the new technologies far less in the classroom than they do at home, and that teachers who use computers for instruction do so infrequently and unimaginatively. Cuban points out that historical and organizational economic contexts influence how teachers use technical innovations. Computers can be useful when teachers sufficiently understand the technology themselves, believe it will enhance learning, and have the power to shape their own curricula. But these conditions can't be met without a broader and deeper commitment to public education beyond preparing workers. More attention, Cuban says, needs to be paid to the civic and social goals of schooling, goals that make the question of how many computers are in classrooms trivial.

Medical and dental examples are included but the main focus is on neuroscience.

Dumont.American writer WILLIAM WALKER ATKINSON (1862-1932)-aka Theron Q. THE GATE TO WOMEN'S COUNTRY

Hachette UK The Gate to Women's Country tells of a society that exists three hundred years after our own has nearly destroyed itself. Now, male warriors are separated from women at an early age and live in garrisons plotting futilely for the battles which must never be fought again. Inside the women's towns, education, arts and science flourish. But for some like Stavia, there is more to see. Her sojourn with the man she is forbidden to love brings into sharp focus the contradictions that define their lives. And when tragedy strikes, Stavia is faced with a decision she never thought she would make - a decision that could forever change their world ... THE PRACTICE OF HEALTH CLAIMS EXAMINING

Prentice Hall Formally known as *Exercises in Health Claims Examining*, *The Practice of Health Claims Examining*, 2e, contains a simulated work program to help you experience the real life situations that a claims examiner experiences on a daily basis. This book is created for use in conjunction with ICDC Publishing's *Guide to Health Claims Examining*. Some of the exercises in the simulated work portion of the book are based upon concepts learned in the *Guide to Health Claims Examining* (i.e., procedures for processing claims, interpretation of contracts, understanding UCR and deductibles, etc.). This book alone should not be considered a complete text for learning health claims examining. It is suggested that a trainee take a complete health claims examining course prior to using this book. The simulated work portion of this text incorporates concepts which are not taught by simple data entry, for example UCR calculations, privacy guidelines, client record keeping, correspondence, and manual completion of claims processing. This text is designed to allow the student to work through the material at their own pace.

TRANSFONTANELLAR DOPPLER IMAGING IN NEONATES

Springer This book examines in detail the role of transfontanellar pulsed and color Doppler imaging in the fetus and neonate. After an introductory chapter its use in the normal neonate is considered. Results of the hemodynamic evaluation of 491 newborns aged from 32 weeks of gestation to 9 months by means of pulsed and color Doppler are reported. Normal values of the resistive index as determined by this technique are documented, and systolic, diastolic, and mean velocities in seven different vessels are presented. It is concluded that Doppler ultrasonography enables reliable analysis of arterial and venous velocities. Subsequent chapters examine the use of transfontanellar Doppler imaging in a variety of commonly encountered pathological conditions.

MODELS IN ENVIRONMENTAL REGULATORY DECISION MAKING

National Academies Press Many regulations issued by the U.S. Environmental Protection Agency (EPA) are based on the results of computer models. Models help EPA explain environmental phenomena in settings where direct observations are limited or unavailable, and anticipate the effects of agency policies on the environment, human health and the economy. Given the critical role played by models, the EPA asked the National Research Council to assess scientific issues related to the agency's selection and use of models in its decisions. The book recommends a series of guidelines and principles for improving agency models and decision-making processes. The centerpiece of the book's recommended vision is a life-cycle approach to model evaluation which includes peer review, corroboration of results, and other activities. This will enhance the agency's ability to respond to requirements from a 2001 law on information quality and improve policy development and implementation.

TRANSACTIONS ON DATA HIDING AND MULTIMEDIA SECURITY X

Springer Since the mid 1990s, data hiding has been proposed as an enabling technology for securing multimedia communication and is now used in various applications including broadcast monitoring, movie fingerprinting, steganography, video indexing and retrieval and image authentication. Data hiding and cryptographic techniques are often combined to complement each other, thus triggering the development of a new research field of multimedia security. Besides, two related disciplines, steganalysis and data forensics, are increasingly attracting researchers and becoming another new research field of multimedia security. This journal, LNCS Transactions on Data Hiding and Multimedia Security, aims to be a forum for all researchers in these emerging fields, publishing both original and archival research results. The six papers included in this issue deal with watermarking security, perceptual image hashing, infrared hiding, steganography and steganalysis.
