The major exam components are: I. Introduction to Privacy: Common Principles and Approaches II. Information Security: Protecting and Safeguarding Personal Information III. Online Privacy: Using Personal Information on Websites and with Other Internet-related Technologies. After this exam the next step is to take the CIPP/US exam or the CIPP/E exam, both of which have a lot of legal topics. It is our opinion that you need to possess both technical knowledge and legal knowledge in order to succeed. When we develop our material we do not classify topics the official way. In fact, we follow our own flow of instructions which we think is more logical for the overall learning process. Don't worry, it does not hurt to do so, as long as you truly comprehend the material. For the EU specialization, the focus of this book is on the various EU laws and regulations. To succeed in the exam, you need to read as many reference books as possible. There is no single book that can cover everything! This ExamFOCUS book focuses on the more difficult topics.

that will likely make a difference in exam results. The book is NOT intended to guide you through every single official topic. The book is also NOT an introductory guide to privacy text. You should therefore use this book together with other reference books for the best possible preparation outcome. **Cipp Information Privacy Professional Foundation Exam & Cipp/Us Exam Examfocus Study Notes & Review Questions 2015 Createspace Independent Publishing Platform** According to the IAPP, candidates seeking their IAPP privacy certification must pass the MC based Certification Foundation exam which covers elementary concepts of privacy and data protection from a global perspective. Barely a week goes by without a new privacy revelation or scandal. Whether by hackers or spy agencies or social networks, violations of our personal information have shaken entire industries, corroded relations among nations, and bred distrust between democratic governments and their citizens. Polls reflect this concern, and show majorities for more, broader, and stricter regulation—to put more laws “on the books.” But there was scant evidence of how well tighter regulation actually worked “on the ground” in changing corporate (or government) behavior—until now. This intensive five-nation study goes inside corporations to examine how the people charged with protecting privacy actually do their work, and what kinds of regulation effectively shape their behavior. And the research yields a surprising result. The countries with more ambiguous regulation—Germany and the United States—had the strongest corporate privacy management practices, despite very different cultural and legal environments. The more rule-bound countries—like France and Spain—trended instead toward compliance processes, not embedded privacy practices. At a crucial time, when Big Data and the Internet of Things are snowballing, Privacy on the Ground helpfully searches out the best practices by corporations, provides guidance to policymakers, and offers important lessons for everyone concerned with privacy, now and in the future. **Full CIPP/US Practice Exam - Case Study Edition Not by IAPP** This document contains a full practice exam based on those tricky case studies, written to provide you with the practice experience to prepare yourself for the actual exam.
