
Online Library Climate Politics And The Climate Movement In Australia

Eventually, you will completely discover a supplementary experience and ability by spending more cash. still when? get you consent that you require to acquire those every needs later than having significantly cash? Why dont you attempt to get something basic in the beginning? Thats something that will guide you to comprehend even more more or less the globe, experience, some places, once history, amusement, and a lot more?

It is your unconditionally own era to achievement reviewing habit. in the middle of guides you could enjoy now is **Climate Politics And The Climate Movement In Australia** below.

KEY=CLIMATE - XIMENA KAUFMAN

Routledge Handbook of the Climate Change Movement

Routledge *This handbook provides a comprehensive overview of the growing transnational climate movement. A dual focus on climate politics and civil society provides a hitherto unavailable broad and systematic analysis of the current global movement, highlighting how its dynamic and diverse character can play an important role in environmental politics and climate protection. The range of contributors, from well-known academics to activist-scholars, look at climate movements in the developed and developing world, north and south, small and large, central and marginal. The movement is examined as a whole and as single actors, thereby capturing its scope, structure, development, activities and influence. The book thoroughly addresses theoretical approaches, from classic social movement theory to the influence of environmental justice frames, and follows this with a systematic focus on regions, specific NGOs and activists, cases and strategies, as well as relations with peripheral groups. In its breadth, balance and depth, this accessible volume offers a fresh and important take on the question of social mobilization around climate change, making it an essential text for advanced undergraduates, postgraduate students and researchers in the social sciences.*

Climate Action Upsurge

The Ethnography of Climate Movement Politics

Routledge *In the late 2000s climate action became a defining feature of the international political agenda. Evidence of global warming and accelerating greenhouse gas emissions created a new sense of urgency and, despite consensus on the need for action, the growing failure of international climate policy engendered new political space for social movements. By 2007 a 'climate justice' movement was surfacing and developing a strong critique of existing official climate policies and engaging in new forms of direct action to assert the need for reduced extraction and burning of fossil fuels. Climate Action Upsurge offers an insight into this important period in climate movement politics, drawing on the perspectives of activists who were directly engaged in the mobilisation process. Through the interpretation of these perspectives the book illustrates important lessons for the climate movement today. In developing its examination of the climate action upsurge, the book focuses on individual activists involved in direct action 'Climate Camps' in Australia, while drawing comparisons and highlighting links with climate campaigns in other locales. The book should be of interest to scholars and researchers in climate change, environmental sociology, politics, policy and activism.*

Climate Politics And The Climate Movement In Australia

Melbourne Univ. Publishing *Climate change is the hottest topic of the twenty-first century and the climate movement a significant global social movement. This book examines the broad context of Australian climate politics and the place of the climate movement within it. Acting 'from above' are the most powerful forces—corporations and governments, both Labor and Coalition—with the media framing the issues. Climate movement actors 'in the middle' include the Australian Greens, major environmental and climate organisations, think-tanks, academics, public intellectuals and the union movement. Acting 'from below' are the numerous local climate action groups and various regional and national networks. This lowest level is the primary location of the climate movement; and grassroots mobilisation the source of its vitality. To advocate a safe climate and climate justice, the book ends by offering a vision for an alternative Australia based upon the principles of social equity and*

environmental sustainability.

Networks in Contention

The Divisive Politics of Climate Change

Cambridge University Press *How do civil society organizations mobilize on climate change? Why do they choose certain strategies over others? What are the consequences of these choices? Networks in Contention examines how the interactions between different organizations within the international climate change movement shape strategic decisions and the kinds of outcomes organizations are able to achieve. First, it documents how and why cleavages emerged in this once-unified movement around the time of the 2009 Copenhagen Summit. Second, it shows how an organization's position in the movement's network has a large influence on the tactics it adopts. Finally, it demonstrates how the development of new strategies within this network has influenced the trajectory of global climate politics. The book establishes the ways in which networks are consequential for civil society groups, exploring how these actors can become more effective and suggesting lessons for the future coordination of activism.*

Climate Action in a Globalizing World

Comparative Perspectives on Environmental Movements in the Global North

Routledge *The existence and urgency of global climate change is a matter of scientific consensus. Yet the global politics of climate change have been anything but consensual. In this context, a wave of global climate activism has emerged in the last decade in response to the perceived failure of the political negotiations. This book provides a unique comparative study of environmental movements in USA, Japan, Denmark and Sweden, analyzing their interaction with the international climate institutions of the United Nations, with national governments, and with currents in the global climate movement. It documents how and why the movement evolved between the Copenhagen Summit of 2009 and the Paris Summit of 2015, altering its strategies and tactics while attracting new actors to the issue area. Further, it demonstrates how the development of global environmental networks has increased contact between environmental movements in the Global North and those from the Global South, resulting in the establishment of 'climate justice' as a political cause and unifying frame for global climate activism.*

Changing Climate Politics

U.S. Policies and Civic Action

CQ Press *Changing Climate Politics provides a comprehensive account of the current state of government action and political participation in the United States on the issue of climate change. Author Yael Wolinsky-Nahmias evaluates the role of the federal government, the courts, states, and cities in tackling the problems created by climate change, offering an inclusive and balanced assessment of progress and challenges. The book further explores the growing role of civic society in climate action plans, analyzing public opinion, the U.S. climate movement, policy making through ballot measures, consumer action, and the prospect of a social transformation toward a more sustainable society. This timely volume examines new approaches to policies and civic action on climate change addressing critical questions about the responsibilities and obligations of governments and citizens.*

Climate Change and Social Movements

Civil Society and the Development of National Climate Change Policy

Springer *Climate Change and Social Movements* is a riveting and thorough exploration of three important campaigns to influence climate change policy in the United Kingdom. The author delves deep into the campaigns and illuminates the way policymakers think about and respond to social movements.

Changing Climate Politics

U.S. Policies and Civic Action

CQ Press *Changing Climate Politics* provides a comprehensive account of the current state of government action and political participation in the United States on the issue of climate change. Author Yael Wolinsky-Nahmias evaluates the role of the federal government, the courts, states, and cities in tackling the problems created by climate change, offering an inclusive and balanced assessment of progress and challenges. The book further explores the growing role of civic society in climate action plans, analyzing public opinion, the U.S. climate movement, policy making through ballot measures, consumer action, and the prospect of a social transformation toward a more sustainable society. This timely volume examines new approaches to policies and civic action on climate change addressing critical questions about the responsibilities and obligations of governments and citizens.

Beyond the Coal Rush

A Turning Point for Global Energy and Climate Policy?

Cambridge University Press *Climate change makes fossil fuels unburnable, but how can the world stop mining coal - the worst source of greenhouse gas emissions?*

Politics of Climate Change

Polity "Climate change differs from any other problem that, as collective humanity, we face today. If it goes unchecked, the consequences are likely to be catastrophic for human life on earth. Yet for most people, and for many policy-makers too, it tends to be a 'back of the mind' issue. ... [This book] argues controversially, we do not have a systematic politics of climate change. Politics-as-usual won't allow us to deal with the problems we face, while the recipes of the main challenger to orthodox politics, the green movement, are flawed at source." - cover.

Climate Change and Capitalism in Australia

An Eco-Socialist Vision for the Future

Routledge Recognizing that climate politics has been an increasingly contentious and heated topic in Australia over the past two decades, this book examines Australian capitalism as a driver of climate change and the nexus between the corporations and Coalition and Australian Labor parties. As a highly developed country, Australia is punching above its weight in terms of contributing to greenhouse gas emissions despite rising temperatures, droughts, water shortages and raging bushfires, storm surges and flooding, and the bleaching of the Great Barrier Reef. Drawing upon both archival and ethnographic research, Hans Baer examines Australian climate politics at the margins, namely the Greens, the labour union, the environmental NGOs, and the grass-roots climate movement. Adopting a climate justice perspective which calls for "system change, not climate change" as opposed to the conventional approach of seeking to mitigate emissions through market mechanisms and techno-fixes, particularly renewable energy sources, this book posits system-challenging transitional steps to shift Australia toward an eco-socialist vision in keeping with a burgeoning global socio-ecological revolution. Accessibly written and including an interview with renowned comedian and climate activist Rod Quantock OAM, this book is essential reading for academics, students and general readers with an interest in climate change and climate activism.

The Politics of Climate Change Knowledge

Labelling Climate Change-induced Uprooted People

Routledge *"This book addresses political knowledge of climate change and its relation to labelling people affected by climate change, either as 'climate refugees' or as 'climate change-induced displaced people or migrants'. By questioning the knowledge of climate change and subsequent labelling of people, this book will spark debate in studies of global climate politics and transnational policy network. Rather than considering the issue of climate change as a given phenomenon, the author explores how the politicized knowledge of climate change has been produced in international negotiations and how that knowledge is transmitted from global forums to local country levels via climate change action plans and resilience projects. This book introduces the concept of multi-scalar knowledge brokers (MKBs) - individual actors who work at multiple levels (local, national, and international) to transmit the knowledge of climate change from global level to local level. The author uses the primary case study of Bangladesh to demonstrate how the dominant actors in global climate politics - the Intergovernmental Panel on Climate Change (IPCC), the United Nations Framework Convention on Climate Change (UNFCCC), and the World Bank, as well as the USA and the UK - interact with the government and local NGOs in Bangladesh regarding transmitting the knowledge of climate change, labelling the uprooted people, and implementing resilience projects. This book will be of interest to students, scholars, and practitioners of international relations, environmental politics, climate change studies, political ecology, political geography, and migration and displacement studies"--*

In Search of Climate Politics

Cambridge University Press *This book addresses the crucial - but oddly neglected - question of what it means to say climate change is political.*

Climate Change as Class War

Building Socialism on a Warming Planet

Verso Books *How to build a movement to confront climate change The climate crisis is not primarily a problem of 'believing science' or individual 'carbon footprints' - it is a class problem rooted in who owns, controls and profits from material production. As such, it will take a class struggle to solve. In this ground breaking class analysis, Matthew T. Huber argues that the carbon-intensive capitalist class must be confronted for producing climate change. Yet, the narrow and unpopular roots of climate politics in the professional class is not capable of building a movement up to this challenge. For an alternative strategy, he proposes climate politics that appeals to the vast majority of society: the working class. Huber evaluates the Green New Deal as a first attempt to channel working class material and ecological interests and advocates building union power in the very energy system we need to dramatically transform. In the end, as in classical socialist movements of the early 20th Century, winning the climate struggle will need to be internationalist based on a form of planetary working class solidarity.*

Interrogating the Post-political

The Case of Radical Climate and Climate Justice Movements

Between mid-2006 and late-2010 the UK experienced a parabola of spectacular protests relating to climate change, ranging from the occupation of airport taxiways through to the blockade of coal power stations. Mobilizing thousands of people, this 'radical climate movement' was distinguished from a popular concern with climate change by its general commitment to direct action, widely-held anti-capitalist and antiauthoritarian beliefs, and a stated focus of tackling the 'root causes' of climate change. Written from within this 'radical climate movement', this thesis is an investigation into the praxis of the movement, exploring the extent to which participants contributed to the emergence of a 'radical' knowledge of climate change, and thus assessing the appropriateness (and effectiveness) of the movement's methodologies. Driven by an internal debate regarding the movement's tendency to depart from its radical political roots, the theoretical core of this thesis draws upon the concept of the

'post-political condition', a condition of the liberal consciousness that forecloses the very possibility of a political praxis on the climate. It is contended that a specific postpolitical discourse of 'dangerous climate change' emerged in the late-1980s which, defined by an apocalyptic discourse that placed a 'carbon fetishism' at the core of its rationale, evacuated the space for political discourse in favour of a general humanitarian effort to forestall "the greatest danger we've ever faced". It is suggested that despite the efforts of many to confront the problem, the UK's 'radical climate movement' broadly failed to escape this liberal discourse. The research thus turns to the international mobilizations around the COP15 in 2009, concluding that the emergence of a discourse of 'climate justice' was a partial attempt to overcome this post-political discourse. From the World People's Conference on Climate Change and the Rights of Mother Earth (CMPCC) in Bolivia, to the continued organization of the Climate Justice Action (CJA) network, it is suggested that 'climate justice' diverged according to two separate discourses - one around 'climate debt' and another around anti-capitalist critique. It is finally concluded that a true politicization necessitates celebrating the death of the environmental movement, instead placing our socialreproduction at the core of any claim to an ecological politics.

Climate Change and Society

Sociological Perspectives

OUP Us *Climate change is one of the most critical issues of the twenty-first century, presenting a major intellectual challenge to both the natural and social sciences. While there has been significant progress in natural science understanding of climate change, social science analyses have not been as fully developed. Climate Change and Society breaks new theoretical and empirical ground by presenting climate change as a thoroughly social phenomenon, embedded in behaviors, institutions, and cultural practices. This collection of essays summarizes existing approaches to understanding the social, economic, political, and cultural dimensions of climate change. From the factors that drive carbon emissions to those which influence societal responses to climate change, the volume provides a comprehensive overview of the social dimensions of climate change. An improved understanding of the complex relationship between climate change and society is essential for modifying ecologically harmful human behaviors and institutional practices, creating just and effective environmental policies, and developing a more sustainable future. Climate Change and Society provides a useful tool in efforts to integrate social science research, natural science research, and policymaking regarding climate change and sustainability. Produced by the American Sociological Association's Task Force on Sociology and Global Climate Change, this book presents a challenging shift from the standard climate change discourse, and offers a valuable resource for students, scholars, and professionals involved in climate change research and policy.*

Climate Justice and the Economy

Social mobilization, knowledge and the political

Routledge *As climate change has increasingly become the main focus of environmentalist activism since the late 1990s, the global economic drivers of CO2 emissions are now a major concern for radical greens. In turn, the emphasis on connected crises in both natural and social systems has attracted more activists to the Climate Justice movement and created a common cause between activists from the Global South and North. In the absence of a pervasive narrative of transnational or socialist economic planning to prevent catastrophic climate change, these activists have been eager to engage with advanced knowledge and ideas on political and economic structures that diminish risks and allow for new climate agency. This book breaks new ground by investigating what kind of economy the Climate Justice movement is calling for us to build and how the struggle for economic change has unfolded so far. Examining ecological debt, just transition, indigenous ecologies, social ecology, community economies and divestment among other topics, the authors provide a critical assessment and a common ground for future debate on economic innovation via social mobilization. Taking a transdisciplinary approach that synthesizes political economy, history, theory and ethnography, this volume will be of great interest to students and scholars of climate justice, environmental politics and policy, environmental economics and sustainable development.*

Climate of Corruption

Politics and Power Behind the Global Warming Hoax

Greenleaf Book Group Argues that special interest groups with specific agendas and politics have corrupted the climate change debate.

Journalism and Climate Crisis

Public Engagement, Media Alternatives

Routledge *Journalism and Climate Crisis: Public Engagement, Media Alternatives* recognizes that climate change is more than an environmental crisis. It is also a question of political and communicative capacity. This book enquires into which approaches to journalism, as a particularly important form of public communication, can best enable humanity to productively address climate crisis. The book combines selective overviews of previous research, normative enquiry (what should journalism be doing?) and original empirical case studies of environmental communication and media coverage in Australia and Canada. Bringing together perspectives from the fields of environmental communication and journalism studies, the authors argue for forms of journalism that can encourage public engagement and mobilization to challenge the powerful interests vested in a high-carbon economy – ‘facilitative’ and ‘radical’ roles particularly well-suited to alternative media and alternative journalism. Ultimately, the book argues for a fundamental rethinking of relationships between journalism, publics, democracy and climate crisis. This book will interest researchers, students and activists in environmental politics, social movements and the media.

Globalising the Climate

COP21 and the climatisation of global debates

Taylor & Francis Frequently presented as a historic last chance to set the world on a course to prevent catastrophic climate change, the 21st Conference of the Parties to the Climate convention (COP21) was a global summit of exceptional proportions. Bringing together negotiators, scientists, journalists and representatives of global civil society, it also constituted a privileged vantage point for the study of global environmental governance "in the making". This volume offers readers an original account of the current state of play in the field of global climate governance. Building upon a collaborative research project on COP21 carried out by a multidisciplinary team of twenty academics with recognised experience in the field of environmental governance, the book takes COP21 as an entry point to analyse ongoing transformations of global climate politics, and to scrutinise the impact of climate change on global debates more generally. The book has three key objectives: To analyse global climate governance through a combination of long-term analysis and on-sight observation; To identify and analyse the key spaces of participation in the global climate debate; To examine the "climatisation" of a series of crosscutting themes, including development, energy, security and migration. This book will be of great interest to students, scholars and policymakers of climate politics and governance, international relations and environmental studies.

Urban Climate Politics

Agency and Empowerment

Cambridge University Press An overview of the forms of agency in urban climate politics, including their strengths, limitations and the power dynamics between them. Written by renowned scholars from around the globe, it is ideal for researchers and practitioners working in the area of urban climate politics and governance.

Ecosocialism and Climate Justice

An Ecological Neo-Gramscian Analysis

Routledge *This book investigates the broader climate movement to contextualise the role played by its climate justice wing, focusing specifically on the theoretical and practical contributions of ecosocialists. Ecosocialism and Climate Justice provides an account of the shift from the Holocene to the Anthropocene in the context of the global spread of capitalist relations of production. Croeser begins by critically analysing the root causes of anthropogenic climate change and identifies the origins and development of the current climate movement within civil society. She then focuses on the climate justice movement, analysing the ways in which anthropogenic global warming may be challenged in a way that is socially just. Overall, this book provides further insight into the effectiveness of ecosocialist theory and activism in the context of existing global, national and local power relationships. This book will be of great interest to students and scholars of climate justice, climate politics, critical global political economy studies and environmental activism.*

What We're Fighting for Now Is Each Other

Dispatches from the Front Lines of Climate Justice

Beacon Press *An urgent, on-the-ground look at some of the “new American radicals” who have laid everything on the line to build a stronger climate justice movement The science is clear: catastrophic climate change, by any humane definition, is upon us. At the same time, the fossil-fuel industry has doubled down, economically and politically, on business as usual. We face an unprecedented situation—a radical situation. As an individual of conscience, how will you respond? In 2010, journalist Wen Stephenson woke up to the true scale and urgency of the catastrophe bearing down on humanity, starting with the poorest and most vulnerable everywhere, and confronted what he calls “the spiritual crisis at the heart of the climate crisis.” Inspired by others who refused to retreat into various forms of denial and fatalism, he walked away from his career in mainstream media and became an activist, joining those working to build a transformative movement for climate justice in America. In What We’re Fighting for Now Is Each Other, Stephenson tells his own story and offers an up-close, on-the-ground look at some of the remarkable and courageous people—those he calls “new American radicals”—who have laid everything on the line to build and inspire this fast-growing movement: old-school environmentalists and young climate-justice organizers, frontline community leaders and Texas tar-sands blockaders, Quakers and college students, evangelicals and Occupiers. Most important, Stephenson pushes beyond easy labels to understand who these people really are, what drives them, and what they’re ultimately fighting for. He argues that the movement is less like environmentalism as we know it and more like the great human-rights and social-justice struggles of the nineteenth and twentieth centuries, from abolitionism to civil rights. It’s a movement for human solidarity. This is a fiercely urgent and profoundly spiritual journey into the climate-justice movement at a critical moment—in search of what climate justice, at this late hour, might yet mean.*

Five Worlds of Political Strategy in the Climate Movement

Mediating Climate Change

Routledge *Climate change has been a significant area of scientific concern since the late 1970s, but has only recently entered mainstream culture and politics. However, as media coverage of climate change increases in the twenty-first century, the gap between our understanding of climate change and climate action appears to widen. In this timely book, Julie Doyle explores how practices of mediation and visualisation shape how we think about, address and act upon climate change. Through historical and contemporary case studies drawn from science, media, politics and culture, Mediating Climate Change identifies the representational problems climate change poses for public and political debate. It offers ways forward by exploring how climate change can be made more meaningful through, for example, innovative forms of climate activism, the reframing of meat and dairy consumption, media engagement with climate events and science, and artistic experimentation. Doyle argues that cultural discourses have problematically situated nature and the environment as objects externalised from humans and culture. Mediating Climate Change calls for a more nuanced understanding of human-environmental relations, in order for us to be able to more fully imagine and address the challenges climate change poses for us all.*

Thinking Like a Climate Governing a City in Times of Environmental Change

Duke University Press *In Thinking Like a Climate* Hannah Knox confronts the challenges that climate change poses to knowledge production and modern politics. Drawing on ethnographic fieldwork among policy makers, politicians, activists, scholars, and the public in Manchester, England—birthplace of the Industrial Revolution—Knox explores the city's strategies for understanding and responding to deteriorating environmental conditions. Climate science, Knox argues, frames climate change as a very particular kind of social problem that confronts the limits of administrative and bureaucratic techniques of knowing people, places, and things. Exceeding these limits requires forging new modes of relating to climate in ways that reimagine the social in climatological terms. Knox contends that the day-to-day work of crafting and implementing climate policy and translating climate knowledge into the work of governance demonstrates that local responses to climate change can be scaled up to effect change on a global scale.

Workers and Trade Unions for Climate Solidarity

Tackling climate change in a neoliberal world

Routledge *This book is a theoretically rich and empirically grounded account of UK trade union engagement with climate change over the last three decades. It offers a rigorous critique of the mainstream neoliberal and ecological modernisation approaches, extending the concepts of Marxist social and employment relations theory to the climate realm. The book applies insights from employment relations to the political economy of climate change, developing a model for understanding trade union behaviour over climate matters. The strong interdisciplinary approach draws together lessons from both physical and social science, providing an original empirical investigation into the climate politics of the UK trade union movement from high level officials down to workplace climate representatives, from issues of climate jobs to workers' climate action. This book will be of great interest to students and researchers in environmental politics, climate change and environmental sociology.*

Climate Change Politics

Cambria Press

How to Blow Up a Pipeline

Verso Books *Property will cost us the earth* The science on climate change has been clear for a very long time now. Yet despite decades of appeals, mass street protests, petition campaigns, and peaceful demonstrations, we are still facing a booming fossil fuel industry, rising seas, rising emission levels, and a rising temperature. With the stakes so high, why haven't we moved beyond peaceful protest? In this lyrical manifesto, noted climate scholar (and saboteur of SUV tires and coal mines) Andreas Malm makes an impassioned call for the climate movement to escalate its tactics in the face of ecological collapse. We need, he argues, to force fossil fuel extraction to stop—with our actions, with our bodies, and by defusing and destroying its tools. We need, in short, to start blowing up some oil pipelines. Offering a counter-history of how mass popular change has occurred, from the democratic revolutions overthrowing dictators to the movement against apartheid and for women's suffrage, Malm argues that the strategic acceptance of property destruction and violence has been the only route for revolutionary change. In a braided narrative that moves from the forests of Germany and the streets of London to the deserts of Iraq, Malm offers us an incisive discussion of the politics and ethics of pacifism and violence, democracy and social change, strategy and tactics, and a movement compelled by both the heart and the mind. Here is how we fight in a world on fire.

Global Capitalism and Climate Change

The Need for an Alternative World System

Rowman & Littlefield Now in its second edition, *Global Capitalism and Climate Change* situates anthropogenic climate change in the context of global capitalism as it stands today and explores the systemic changes necessary to create a more socially just, democratic, and environmentally sustainable world system.

The Domestic Politics of Global Climate Change

Key Actors in International Climate Cooperation

Edward Elgar Publishing Why are some countries more willing and able than others to engage in climate change mitigation? *The Domestic Politics of Global Climate Change* compiles insights from experts in comparative politics and international relations to describe and explain climate policy trajectories of seven key actors: Brazil, China, the European Union, India, Japan, Russia, and the United States. Using a common conceptual framework, the authors find that ambitious climate policy change is limited by stable material parameters and that governmental supply of mitigation policies meet (or even exceed) societal demand in most cases. Given the important roles that the seven actors play in addressing global climate change, the book's in-depth comparative analysis will help readers assess the prospects for a new and more effective international climate agreement for 2020 and beyond.

Struggles for Climate Justice

Uneven Geographies and the Politics of Connection

Springer Nature This book provides an accessible but intellectually rigorous introduction to the global social movement for 'climate justice' and addresses the socially uneven consequences of anthropogenic climate change. Deploying relational understandings of nature-society, space, and power, Brandon Derman shows that climate change has been co-produced with social inequality. Mismatching levels of responsibility and vulnerability, and institutions that emerged in tandem with those disproportionalities compose the terrain on which NGOs and social movements now contest climate injustice in a wide-ranging "politics of connection." Case-based chapters explore the defining commitments of affected and allied communities, and how they have shaped specific struggles mobilizing human rights, international treaties, transnational activist forums, national and local constituencies, and broad-based demonstrations. Derman synthesizes these cases and similar efforts across the globe to identify and explore crosscutting themes in climate justice politics as well as the opportunities and dilemmas facing advocates and activists, and those who would ally with them going forward. How should we understand campaigns for climate justice? What do these initiatives share, and what differentiates them? What, in fact, does "climate justice" mean in these contexts? And what do the framing and progression of such efforts in different settings suggest about the broader conditions that produce and sustain climate injustice, how those conditions could be unmade, and what might take their place? *Struggles for Climate Justice* approaches these questions from an interdisciplinary perspective accessible to graduate and advanced undergraduate students as well as scholars of geography, social movements, environmental politics, policy, and socio-legal studies.

Ecomodernism: Technology, Politics and The Climate Crisis

John Wiley & Sons Is climate catastrophe inevitable? In a world of extreme inequality, rising nationalism and mounting carbon emissions, the future looks gloomy. Yet one group of environmentalists, the 'ecomodernists', are optimistic. They argue that technological innovation and universal human development hold the keys to an ecologically vibrant future. However, this perspective, which advocates fighting climate change with all available technologies – including nuclear power, synthetic biology and others not yet invented – is deeply controversial because it rejects the Green movement's calls for greater harmony with nature. In this book, Jonathan Symons offers a qualified defence of the ecomodernist vision. Ecomodernism, he explains, is neither as radical or reactionary as its critics claim, but

belongs in the social democratic tradition, promoting a third way between laissez-faire and anti-capitalism. Critiquing and extending ecomodernist ideas, Symons argues that states should defend against climate threats through transformative investments in technological innovation. A good Anthropocene is still possible – but only if we double down on science and humanism to push beyond the limits to growth.

The Politics of Climate Change Knowledge

Labelling Climate Change-induced Uprooted People

Routledge This book addresses political knowledge of climate change and its relation to labelling people affected by climate change, either as ‘climate refugees’ or as ‘climate change-induced displaced people or migrants’. By questioning the knowledge of climate change and subsequent labelling of people, this book will spark debate in studies of global climate politics and transnational policy networks. Rather than considering the issue of climate change as a given phenomenon, the author explores how the politicized knowledge of climate change has been produced in international negotiations and how that knowledge is transmitted from global forums to local country levels via climate change action plans and resilience projects. This book introduces the concept of multi-scalar knowledge brokers (MKBs) – individual actors who work at multiple levels (local, national, and international) to transmit the knowledge of climate change from global level to local level. The author uses the primary case study of Bangladesh to demonstrate how the dominant actors in global climate politics – the Intergovernmental Panel on Climate Change (IPCC), the United Nations Framework Convention on Climate Change (UNFCCC), and the World Bank, as well as the USA and the UK – interact with the government and local NGOs in Bangladesh regarding transmitting the knowledge of climate change, labelling the uprooted people, and implementing resilience projects. This book will be of interest to students, scholars, and practitioners of international relations, environmental politics, climate change studies, political ecology, political geography, and migration and displacement studies. The Open Access version of this book, available at www.taylorfrancis.com, has been made available under a Creative Commons Attribution-Non Commercial- No Derivatives 4.0 license.

Addressing the Climate Crisis

Local action in theory and practice

Springer Nature This open access book brings together a collection of cutting-edge insights into how action can and is already being taken against climate change at multiple levels of our societies, amidst growing calls for transformative and inclusive climate action. In an era of increasing recognition regarding climate and ecological breakdown, this book offers hope, inspiration and analyses for multi-level climate action, spanning varied communities, places, spaces, agents and disciplines, demonstrating how the energy and dynamism of local scales are a powerful resource in turning the tide. Interconnected yet conceptually distinct, the book’s three sections span multiple levels of analysis, interrogating diverse perspectives and practices inherent to the vivid tapestry of climate action emerging locally, nationally and internationally. Delivered in collaboration with the UK’s ‘Place-Based Climate Action Network’, chapters are drawn from a wide range of authors with varying backgrounds spread across academia, policy and practice.

Imagining the Future of Climate Change

World-Making Through Science Fiction and Activism

Univ of California Press This title is part of American Studies Now and available as an e-book first. Visit ucpress.edu/go/americanstudiesnow to learn more. From the 1960s to the present, activists, artists, and science fiction writers have imagined the consequences of climate change and its impacts on our future. Authors such as Octavia Butler and Leslie Marmon Silko, movie directors such as Bong Joon-Ho, and creators of digital media such as the makers of the Maori web series Anamata Future News have all envisioned future worlds in the wake of imminent environmental collapse, engaging audiences to think about the earth’s sustainability. As public awareness of climate change has grown, so has the popularity of imaginative works of climate fiction that connect science with activism. Today real-world social movements helmed by Indigenous people and people of color are leading the way against the greatest threat to our environment: the fossil fuel industry. It is through these stories and

*movements by Natives and people of color—both in the real world and imagined through science fiction—that we understand the relationship between culture and activism and how both can be a valuable tool in creating our future. *Imagining the Future of Climate Change* introduces readers to the history and most significant flashpoints in climate justice through speculative fictions and social movements to explore post-disaster possibilities and the art of world-making.*

This Changes Everything

Capitalism Vs. The Climate

Simon and Schuster *Explains why the environmental crisis should lead to an abandonment of "free market" ideologies and current political systems, arguing that a massive reduction of greenhouse emissions may offer a best chance for correcting problems.*

Extinction Rebellion and Climate Change Activism

Breaking the Law to Change the World

Springer Nature *This book summarises and critiques Extinction Rebellion (XR) as a social movement organisation, engaging with key issues surrounding its analysis, strategy and tactics. The authors suggest that XR have an underdeveloped and apolitical view of the kind of change necessary to address climate change, and that while this enables the building of broad movements, it is also an obstacle to achieving the systemic change that they are aiming for. The book analyses different forms of protest and the role of civil disobedience in their respective success or failure; democratic demands and practices; and activist engagement with the political economy of climate change. It engages with a range of theoretical perspectives that address law-breaking in protest and participatory forms of democracy including liberal political theory; anarchism and forms of historical materialism, and will be of interest to students and scholars across politics, international relations, sociology, policy studies and geography, as well as those interested in climate change politics and activism.*

No Planet B

The Teen Vogue Guide to the Climate Crisis

Haymarket Books *Teen Vogue, the fresh voice of a generation of activists, curates a dynamic collection of timely pieces on the climate justice movement. With accessible, concise explanations of the features and causes of climate change as well as pieces urging an intersectional approach to environmental justice this book is the handbook for the emerging youth climate movement. Using a feminist, indigenous, antiracist, internationalist lens the book paints a picture of a world in climate crisis and presents bold, courageous ideas for how to save it. Featuring introductions from leading climate activists, No Planet B is essential reading for everyone fighting for a Green New Deal and more.*
