DYSPHAGIA EVALUATION AND TREATMENT

FROM THE PERSPECTIVE OF REHABILITATION MEDICINE

Springer This book presents a comprehensive approach to treating dysphagia that has been successfully applied in actual rehabilitation settings. Its main purposes are firstly to equip readers with a strong conceptual understanding of swallowing evaluation and treatment, secondly to provide guidance on the procedure of practical comprehensive dysphagia rehabilitation in real-world settings, and thirdly to update readers on the latest diagnostic and treatment technologies. To do so, it employs the concept of swallowing rehabilitation pioneered at Fujita Health University Rehabilitation. The book is divided into 4 major sections, the first of which introduces readers to the general aspects and the principle of deglutition. In turn, Part II offers clinical approaches to both non-instrumental and instrumental evaluation of swallowing. Part III addresses treatment options in swallowing rehabilitation, especially exercises based on motor learning. Lastly, Part IV highlights three clinical cases demonstrating clinical approaches in dysphagic patients. Readers will find this text useful both as an initial guide and a reference work for assisting clinicians, allowing them to further expand swallowing assessment and treatment, and facilitating the development of swallowing rehabilitation in real-world settings in education and rehabilitation.
