State on Board!

Navigating Corporate Governance in Emerging Market Business

[Springer Nature](#) Research in this book focuses on the strategic behaviour of the State as a shareholder in businesses, and the implications it has for the other shareholder(s) and business performance. It investigates the institutional characteristics of State-linked and State-owned firms (SIEs & SOEs), in emerging markets using Vietnam as a case study with comparative analysis on China and selected ASEAN countries. In doing so, the book adopts an evidence-based approach to explain the State's role as a shareholder in the different aspects of corporate governance, including CEO appointment, board structure and impact of State ownership on business strategy and performance. It highlights the influence of the State as a shareholder by investigating institutional factors consistent with "path dependence" theory, which postulates that the initial and underlying structure of an economy influences its performance. In addition, the book presents empirical evidence of the dynamics of corporate governance arising from interactions between the State and other shareholders, which has not yet been addressed in the literature, and is distinctive in providing new insights from both qualitative and empirical research on how to successfully navigate the emerging market business environments from the perspective of the State as an "owner-participant". Explaining the theoretical constructs in corporate governance in State-invested firms, empirical research methodologies, and results to draw and validate inferences, the book is comprehensive and provides a practical guide for

practitioners as well as a reference for academics, undergraduate and postgraduate students. The new theoretical models proposed integrate traditional political-economic and agency theories, which also underpin tertiary business courses and academic research.

The Stress Test Every Business Needs

A Capital Agenda for Confidently Facing Digital Disruption, Difficult Investors, Recessions and Geopolitical Threats

[John Wiley & Sons](#) Future-proof your business today for stronger performance tomorrow The Stress Test Every Business Needs: A Capital Agenda for Confidently Facing Digital Disruption, Difficult Investors, Recessions and Geopolitical Threats provides a comprehensive approach to creating value and flexibility in an increasingly volatile business environment that presents both great risks and opportunities every day. The authors extend the banking “stress test” concept to a company’s Capital Agenda — how executives manage capital, execute transactions and apply corporate finance tools to strategic and operational decisions. Having a static Capital Agenda, however appropriate for your current market position, is not enough in today’s uncertain world. Long-term success comes from building resilience into each element and in the way those elements interact. The book uses a broader definition of business stress that includes traditional macroeconomic and geopolitical risks, as well as technological disruption, hostile takeovers and activist shareholders. Companies that make poor strategic decisions or underperform operationally will likely find themselves facing great stress. And that stress is symmetric; threats come from downside risks and from missed opportunities. The chapters address the how and why of essential issues such as: Formulating corporate strategy in a digital world Pre-empting activist shareholders Restoring distressed companies to operational and financial health Ensuring effective collaboration among strategy, finance and operations Getting the most out of your advisors Proactively managing intrinsic value Rigorously allocating capital across the enterprise Acquiring and divesting for optimum value Syncing financing decisions with business strategy and capital market conditions Incorporating tax planning throughout the Capital Agenda Liberating excess cash with leading working capital management practices Aligning strategic goals and metrics to reach your company’s full potential Companies that develop strategy and set operational priorities with a balanced Capital Agenda are best positioned to control their own destiny. The Stress Test Every Business Needs provides a roadmap to future-proof your business today for stronger performance tomorrow.

Modern Financial Management

Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.

No Ordinary Disruption

The Four Global Forces Breaking All the Trends

[PublicAffairs](#) Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global Institute, No Ordinary Disruption: The Four Forces Breaking all the Trends is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy—often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up poorer than their parents. What sets No Ordinary Disruption apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China—Tianjin—will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life— facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.

Loose-Leaf Corporate Finance: Core Principles and Applications

[McGraw-Hill Education](#) **Corporate Finance: Core** was developed for the graduate (MBA) level as a concise, up-to-date, and to-the-point product, the majority of which can be realistically covered in a single term or course. To achieve the objective of reaching out to the many different types of students and the varying course settings, corporate finance is distilled down to its core, while maintaining a decidedly modern approach. Purely theoretical issues are downplayed, and the use of extensive and elaborate calculations is minimized to illustrate points that are either intuitively obvious or of limited practical use. The goal was to focus on what students really need to carry away from a principles course. A balance is struck by introducing and covering the essentials, while leaving more specialized topics to follow-up courses. Net present value is treated as the underlying and unifying concept in corporate finance. Every subject covered is firmly rooted in valuation, and care is taken throughout to explain how particular decisions have valuation effects. Also, the role of the financial manager as decision maker is emphasized, and the need for managerial input and judgment is stressed.

Business and Politics in Asia's Key Financial Centres

Hong Kong, Singapore and Shanghai

[Springer](#) This book provides unique insights into the politics of finance and the socio-political relations which drive financial policymaking in Hong Kong, Singapore, and Shanghai. While the existing literature in the field focuses mainly on economic explanations for financial centre development, this book fills a gap by focusing on the socio-political relations which underpin the financial policy-making process. Drawing on extensive interviews with senior policy-makers and financial sector professionals, the book describes how state-industry relations drive financial policy-making in three major financial hubs. Insights and policy recommendations drawn from these interviews will be particularly useful for policy-makers and financial sector professionals hoping to draw lessons from the successful development of the three leading Asian financial centres. *Business and Politics in Asia's Key Financial Centres* draws on public policy theoretical frameworks for its analytical basis. The three chapters focusing on the historical development of Hong Kong, Singapore, and Shanghai also provide a consolidated narrative with regard to the development of these three cities as leading financial centres, while also serving as independent case studies. Scholars focusing on policy processes and political factors that underpin financial sector development, as well as instructors and students of public policy, international political economy, and financial sector policy, will find this book useful for their research.

Economic and Financial Integration in South Asia

A Contemporary Perspective

[Taylor & Francis](#) This book analyses the current state and potential of economic and financial integration in South Asia, which has emerged as one of the most dynamic regions of the world. It looks at how regional convergences and cooperation would reinforce ties amongst the diverse economies of South Asia in the changing global economic landscape. Drawing on empirical research, the book looks at the degree of economic and financial integration in South Asia, which according to the World Bank includes the least integrated regions in the world, and explores the fundamental factors that drive integration amongst these countries. It offers important insights into the financial landscape of the region, as well as the dynamics of the interlinkages in the banking system, the stock markets, and the debt markets. The book examines the role of bilateral trade in augmenting regional economic ties, the opportunities for growth these will foster, and the major challenges and roadblocks for the leaders of the region. It also provides an overview of China's role in South Asia's financial integration and the interdependence of these economies for economic opportunities, macroeconomic and financial stability, jobs, sustainable growth, and inclusive development. Detailed and insightful, this book will be of great interest to investors and regional policymakers. It will also be of interest to researchers and students of economics, public and foreign policy, finance, international relations, and South Asia studies.

The Great Demographic Reversal

Ageing Societies, Waning Inequality, and an Inflation Revival

[Springer Nature](#) This original and panoramic book proposes that the underlying forces of demography and globalisation will shortly reverse three multi-decade global trends - it will raise inflation and interest rates, but lead to a pullback in inequality. "Whatever the future holds", the authors argue, "it will be nothing like the past". Deflationary headwinds over the last three decades have been primarily due to an enormous surge in the world's available labour supply, owing to very favourable demographic trends and the entry of China and Eastern Europe into the world's trading system. This book demonstrates how these demographic trends are on the point of reversing sharply, coinciding with a retreat from globalisation. The result? Ageing can be expected to raise inflation and interest rates, bringing a slew of problems for an over-indebted world economy, but is also anticipated to increase the share of labour, so that inequality falls. Covering many social and political factors, as well as those that are more purely macroeconomic, the authors address topics including ageing, dementia, inequality, populism, retirement and debt finance, among others. This book will be of interest and understandable to anyone with an interest on where the world's economy may be going.
