NURTURING A HEALTHY MIND

DOING WHAT MATTERS MOST FOR YOUR CHILD'S DEVELOPING BRAIN

Exisle Publishing The 90's was declared the "Decade of the Brain" and a flurry of research on brain development soon followed. The result: two decades on we now know more about the brain than we did since the first recorded writings 6000 years ago. Advances in technology and science have taught us a great deal and 'Nurturing a Healthy Mind' supports the growing consensus that research on brain development is relevant to parenting. At the beginning of the twenty-first century, parents and teachers are seeing the benefits of this research, with child rearing and education being shaped by new understandings of the human brain. It is becoming wider knowledge that the interactions between our genetic makeup, early experiences and environmental influences shape the architecture of the developing brain. And as such our understanding of the importance of the early years of life have, thankfully, received much greater attention and scrutiny. We are witnessing a tsunami of research, in conjunction with well-informed individuals, looking to ensure that all children receive the attention they need in their earliest days of life. 'Nurturing a Healthy Mind', with its easy-to-understand format, gives parents and early caregivers a great opportunity to tap into this research and provide the best environment possible for healthy child development.

AREA 51 - BLACK JETS

A HISTORY OF THE AIRCRAFT DEVELOPED AT GROOM LAKE, AMERICA'S SECRET AVIATION BASE

Zenith Press Area 51's most important military aviation developments are profiled in an illustrated format. When most of us think of Area 51, we think of aliens, UFOs, and controversial government cover-ups. It's easy to forget that, since the mid-1950s, the United States' famed extension of Edwards Air Force Base has served as a top-secret CIA testing ground for many of the most groundbreaking advancements in American military aviation technology. In Area 51 - Black Jets, author and military historian Bill Yenne offers the first fully illustrated chronology of Area 51's most famous aircraft projects, including Lockheed's U-2 "Dragon Lady" and SR-71 "Blackbird" reconnaissance planes, drones ranging from the early Lockheed D-21 to the modern-day General Atomics MQ-1 Predator, and the famous F-117 Nighthawk stealth fighter produced by the Have Blue program during the 1970s. Each project is given its own fascinating chapter illuminating the aircraft's development at this famed location. But beyond the aircraft themselves, Area 51 - Black Jets also covers a handful of the many classified experimental programs carried out at Area 51 over the years, such as Have Doughnut, Have Ferry, and Have Drill - secret undertakings that successfully reverse-engineered such enemy aircraft as the Russian MiG during the Cold War. Presented in beautiful hardcover format and illustrated with historic color and black-and-white photographs, diagrams, and maps, this book reveals Area 51 for what it truly is: a clandestine area for the United States' most cutting-edge technological innovators in military aviation.
