Trouble in the Making?

The Future of Manufacturing-Led Development

World Bank Publications Technology and globalization are threatening manufacturing's traditional ability to deliver both productivity and jobs at a large scale for unskilled workers. Concerns about widening inequality within and across countries are raising questions about whether interventions are needed and how effective they could be. Trouble in the Making? The Future of Manufacturing-Led Development addresses three questions: - How has the global manufacturing landscape changed and why does this matter for development opportunities? - How are emerging trends in technology and globalization likely to shape the feasibility and desirability of manufacturing-led development in the future? - If low wages are going to be less important in defining competitiveness, how can less industrialized countries make the most of new opportunities that shifting technologies and globalization patterns may bring? The book examines the impacts of new technologies (i.e., the Internet of Things, 3-D printing, and advanced robotics), rising international competition, and increased servicification on manufacturing productivity and employment. The aim is to inform policy choices for countries currently producing and for those seeking to enter new manufacturing markets. Increased polarization is a risk, but the book analyzes ways to go beyond focusing on potential disruptions to position workers, firms, and locations for new opportunities. www.worldbank.org/futureofmanufacturing

Intellectual Property Rights and the Corporate Confiscation of Creativity

Palgrave Macmillan This book describes how corporate powers have erected a rapacious system of intellectual property rights to confiscate the benefits of creativity in science and culture. This legal system threatens to derail both economic and scientific progress, while disrupting society and threatening personal freedom. Perelman argues that the natural outcome of this system is a world of excessive litigation, intrusive violations of privacy, the destruction system of higher education, interference with scientific research, and a lopsided distribution of income.
